

MARK L CUSTOM JAZZY DRIVE

MARK L Custom Guitar Effects:

- Handcrafted by passionate professionals for musicians.
- Include highest-quality components e.g. NEUTRIK, ALPHA, SWITCHKRAFT, MLC, BURR BROWN
- Everything is built inside a sturdy powder coated aluminum chassis, helping to cope with the hardest stage wear and tear one can expect.
- 100% analog signal line, creating a warm and rich tone.
- TRUE BYPASS for extreme tone clarity.
- Before shipping, each device is carefully inspected by the company's inside personnel as well as professional musicians who take part in the construction of our devices.

MARK L JAZZY DRIVE is an overdrive build on the platform of the vintage overdrive, but the changes applied give it a new, individual character. Thanks to incorporating and **OPA BURR BROWN** circuit as well as polypropylene capacitors we reached a perfect 'lamp tone'. The effect is tone clear in which all nuances of solo and chord play remain clearly present. Using the crunch channel in the MODERN position, you do not lose the bottom-end of the spectrum, but gain a meatier and thicker distortion.

In combination with the CLEAN channel you get an incredible lamp-style CRUNCH while using it with the LEAD channel you receive a strong solo tone. The MODE switch allows you to choose between an old and new tone.

CONTROL

Level Out: Effect gain dial

Color Tone: DARK to BRIGHT control dial

Level Drive: CLEAR to DISTORTION gain dial

MODE: LOW-CUT 4 positions regulator switch

External Power supply:

MARK L JAZZY DRIVE is fed externally, through a stabilized direct current 9VDC, thanks to which no battery supply may be needed and equipped with an industry standard 2,1x 5,5mm power supply input. To ensure the best, most stable and deprived of any background hum power supply, we suggest using **MLC FX POWER BOX PRO**.

Guarantee:

Mark L custom Guitar Electronics gives a 2 year warranty for all electronic and mechanical elements apart from the battery. The guarantee does not include mechanical damage, soiling, flood, improper power supply, fire, natural disasters, improper installation or exploitation not according to use.
